TRI/Environmental, Inc.

1-800-880-TEST

AIR TESTING

AIR TESTING for the air that you breathe. TRI, an AIHA accredited laboratory for industrial hygiene, provides compressed air testing and indoor testing for commercial, medical, dive and fire department regulations and standards. We care about the air that you breathe—underwater, fighting fires or in your office.

Compressed Air Testing

You will receive a compressed air testing kit with fittings to allow convenient connection to your compressed air system. The entire sampling procedure takes just minutes and comes with simple but detailed instructions. After taking the test, the samples are then returned to TRI for analysis. All laboratory analyses are completed within 24 hours. A detailed analytical report and a certificate suitable for framing is mailed within three days.

Indoor Air Quality Testing (IAQ)

TRI/Environmental, Inc. has developed a cost effective Building Air Screen for Indoor Contaminants Kit (BASICKit) to assist you with diagnosing indoor air complaints. Our easy to operate Indoor Air Quality (IAQ) air sampling system consists of a manually operated air exchange pump and a non-pressurized sample container which can be used to measure indoor air quality in practically any area. Analytical results are provided within 24-hours from receipt of samples at TRI.

Air Quality Standards

There are many air quality standards governing compressed air that's used for life support and suggested standards for indoor air quality. TRI's laboratory has the capability to sample and analyze all the requirements to meet these standards and many more. Please visit our web page for links to air quality standards.
